Form QF025
 Version 5

Rock Bucket - Heavy Duty

The finger tines have a 6" spacing which allow the gravel and small rocks to fall away while the larger rocks collect in the skeletal like bucket. The collected large rocks ride in a curved shaped pocket, that helps them from rolling out freely. Tines are thicker than our other rock buckets, 0.5" vs 0.375".

Shown here with tractor hook-up, also available with universal style skid steer mounting plate.
