Rock Bucket - Heavy Duty

Form QF025
Version 1

Shown here with tractor hook-up, also available with universal style skid steer mounting plate.

The finger tines have a 6 inch spacing which allow the gravel and small rocks to fall away while the larger rocks collect in the skeletal like bucket. The collected large rocks ride in a curved shaped pocket, that helps them from rolling out freely. Tines have twice the thickness of our model R rock buckets.

Rock Bucket Specifications
