 Version 4

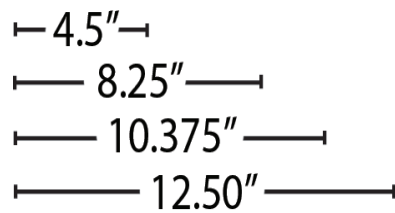

Skid-Steer Universal Plate

The universal attachment plate which welds in to place, has oval shaped openings that allows greater weld coverage, for a stronger weld spread between the universal attachment plate and your bucket.

Change out your buckets current mounting system to a more universal style, with the universal attachment plate.
 (bucket conversion)

The universal style attachment plate comes already spaced and squared. To do the conversion remove the old hook-up from your bucket and weld the new universal plate in it's place on the bucket.

Check your skid-steer manufacturer specifications before ordering.

Universal Plate				
Model Number				UP45
Inside Height				16"
Inside Weight				3"
Overall Width				45"
Made in the U.S.A.		Specifications are subject to change without notice.
